

Wet Well Wizard Testimonial

July 2025

To Whom It May Concern;

Spotsylvania County Utilities has utilized the Wet Well Wizard at three pump station lift sites. At each site the FOG has been eliminated. The site that benefited us the most is the Wishner site, where three Wet Well Wizards were installed in one wet well. This lift station pumps over 700,000 GPD. The FOG at this station would build up to over two feet in thickness, and the silt/sludge build-up in the bottom of the well would cut down on the performance and maximum discharge flow of the pumps. This station required cleaning twice a year. This would include a confined space entry for three personnel, two vacuum trucks with drivers and at least one attendant for a minimum eight hours each time it was cleaned, resulting in over \$3000.00 in labor and equipment cost per cleaning. We are nearing the two-year mark of installing the Wizards at this site and we have not had to clean this station since they were installed.

The two other sites where the Wet Well Wizards are being utilized have shown the same results. While the cleaning method for these two stations are less complicated and can all be done from above ground, we were cleaning these stations quarterly. Since the install of the Wet Well Wizards we have not had to clean either of these lift stations. The wet well wizard is easy to install, and you will see results in only a few days. The Wet Well Wizard has been a benefit to us.
